

Turning Carbon into Gold

Daniel Laubacher

Introduction

Take the E in Energy to charge electrons thoroughly,
CO2 should be a friend not foe.
If we use technology not lost in terminology,
We will see it might just be a go.

Turning carbon into gold
Will transform air from hot to cold.
If we feed the CO2 to plants
we'll put the climate change on hold.

Now, take the G in Energy by using green with synergy,
With the hopes to bring the forests back.
If we're working towards the goal of cleaning up the mess we've made,
Then the Earth might not give us the sack.

We could win if we don't give in,
We can beat atmospheric heat.
We must try, try and try again
Otherwise we will meet the end.

Turning carbon into gold
Will transform air from hot to cold.
If we feed the CO2 to plants
we'll put the climate change on hold.

GROUP 1

Let's take the E in Energy to charge
electrons thoroughly,
CO2 should be a friend not foe.
If we use technology not lost in terminology,
We will see it might just be a go.

GROUP 2

We could win if we don't give in,
We can beat atmospheric heat,
We must try, try and try again
Otherwise we will meet the end.

Turning carbon into gold
Will transform air from hot to cold.
If we feed the CO2 to plants
we'll put the climate change on hold.

Turning carbon into gold
Will transform air from hot to cold.
If we feed the CO2 to plants
we'll put the climate change on hold.
